**TO ALL EXEC BUILDERS**

**EXEC MANDATORY/ADVISORY SERVICE BULLETIN A-07**

History: Electronic Ignition Systems have proven to be more reliable and easier to maintain than conventional distributor ignitions.

Action: For Exec helicopters, RotorWay International recommends **ONLY** the Dual electronic Ignition system as equipped on our R.I. 162 engines. This system features two completely independent ignition systems, including two spark plugs per cylinder, designed to operate simultaneously. Either ignition system will support full power performance. We recommend only this ignition system and will no longer sell or support distributor ignitions.

The dual electronic ignition system may be fitted to any Exec with the RW 145 or RW 152 engine, and is strongly recommended.

If you have purchased a rebuilt distributor from RotorWay International, the conversion to the dual electronic ignition system is regarded as mandatory.
